The Most Energy-Efficient System of its Kind*: Lennox' New Strategos™ Rooftop Unit to be Unveiled at 2008 AHR Show

DALLAS, TX – January 3, 2008 – Lennox will introduce its most innovative light commercial product line to date at the 2008 AHR Show in January at **booth number 667**. Strategos™ rooftop units are designed to cut energy usage, cost less to operate than other systems and help reduce businesses' environmental impact.

“There is no better option than Strategos rooftop units for light commercial building owners looking to upgrade to industry-leading efficiency,” said Larry Wei, Lennox Commercial Rooftop Unit Product Manager. “In fact, Strategos units are up to 66% more efficient than the most stringent requirements of the U.S. Department of Energy and ASHRAE. That translates into real dollar savings for our customers.” Strategos rooftop units were also recognized by AHR, earning an honorable mention in the 2008 AHR Innovation Awards in the Green Buildings category.

Strategos units boast efficiency ratings up to 14.3 EER, 16.1 SEER and 16.4 IPLV, providing immediate and long-term savings. Strategos units also help customers meet green building design objectives and can even help buildings qualify for LEED® credits.

Lennox continues its legacy of innovation with Strategos' MSAV™ (multi-stage air volume) supply fan option. This revolutionary new technology allows Strategos units to conserve energy during partial cooling operation while still meeting comfort requirements. All Strategos units are preset at the factory for quick and easy start-up; airflow settings can also be modified in the field via the Integrated Modular Controller to match an application's specific needs.

Expo attendees can learn more about Strategos rooftop units by viewing a live, 10-minute presentation at the Lennox Commercial booth. Presentations are scheduled throughout the days of January 22, 23 and 24. Visitors can register for specific times at www.lennox.com, although walk-ins are welcome.

About Lennox International Inc. (LII)

A worldwide leader in heating and air conditioning systems, LII Residential and LII Commercial Heating & Cooling are based near Dallas, Texas, and are part of Lennox International Inc. Deeply committed to helping consumers and businesses reduce energy

needs and lessen their environmental impact, the company offers a wide range of resources for improving efficiency, including a selection of ENERGY STAR[®] qualified products. Lennox International Inc. operates in more than 100 countries.
