New Landmark™ R-410A rooftop unit line provides excellent value for replacement and new construction projects

DALLAS, TX — March 12, 2008 — Ideal for both emergency and planned replacement jobs, the new Landmark™ rooftop unit line from Lennox is an off-the-shelf option that provides excellent value and is suitable for most types of applications. Engineered to effectively handle standard requirements on nearly all light commercial jobs, Landmark units will be available in 2- to 6-ton capacities in May 2008

Better for business, better for the environment

Cost-effective and reliable, every 2- to 6-ton Landmark rooftop unit is ENERGY STAR® qualified for energy savings and meets 2010 efficiency standards. Available in Gas/Electric, Cooling Only (electric heat) and Heat Pump models, all Landmark units utilize R-410A – the environmentally friendlier refrigerant replacing the chlorine-containing R-22 – to help businesses control rising maintenance costs associated with the limited availability of R-22.

Built from durable materials and designed for reliability, Landmark units are available with stainless steel heat exchangers, coil corrosion protection and hinged doors, and are tested before leaving the factory. Extensive warranties provide peace of mind and control over service costs.

The fast choice for replacements, or any installation

With several standard features for convenience — such as plug connections for wiring, panel knockouts and pre-installed accessory framing — and a wide range of field-installed accessories, Landmark units are a superior choice for emergency replacement jobs. A variety of configurations is available for fast delivery or pickup at commercial depots across North America. Or, Landmark units can provide quick, built-to-order solutions designed to exact specifications in just a few weeks.

Factory- and field-installed options provide maximum flexibility and include:

- Economizers with single or dual enthalpy control
- CO₂ sensors
- Return and supply air smoke detectors
- HACR circuit breakers
- Nonpowered GFI
- 50% constant-volume powered exhaust fan
- Barometric relief dampers

- Motorized or manual outdoor dampers
- High- and low-static drive kits

Lennox can also provide next-day delivery for virtually any replacement part to most job sites in North America. If you'd like more information about Landmark rooftop units, please contact Lennox at 1-800-9-LENNOX or visit **www.lennox.com**.
