## L Connection® Network from Lennox is 2006 Editor's Choice in *Buildings* Magazine

**DALLAS, TX (March 15, 2006)** – Designed to provide advanced control of buildings from virtually anywhere, the L Connection® Network from Lennox has been selected by *Buildings* magazine as a 2006 Editors' Choice Top Product Picks. *Buildings* is a 100-year-old publication reaching 72,000 commercial building owners and professional facilities managers who are responsible for more than 4.4 million commercial and institutional buildings nationwide.

Lennox developed its innovative L Connection Network as a building automation system that offers customization and control in a single, easy-to-use system. The Network's Integrated Modular Controller (IMC) provides more than 200 configuration parameters, allowing HVAC professionals to optimize the system for specific projects or applications. The simple, intuitive Comfort Sensor interface allows easy day-to-day communication with the system, while optional PC software provides **both local and remote access** to a specific controller or the entire network.

"We are pleased to include the L Connection Network as a Top Product Pick winner and recognize the product as a solution to improve the performance of a building," said Linda Monroe, managing editor of *Buildings*.

The elite Top Product Picks were selected based on a number of factors: ease of use, durability/lifecycle, efficiency of applicability, universal appeal, sustainable/green elements, aesthetics and more.

For additional information about the L Connection Network, please visit [www.lennox.com](http://www.lennox.com).
