

# COMMERCIAL TRAINING TOOLBOX TIPS

## **Heating Season Checks**

### Applies to all Lennox Electric/Electric (Cooling-Only with Electric Heat) and Heat Pump Rooftop Units

#### **Helpful Resources**

1. Installation manual for rooftop unit.

#### **Electric Heat**

#### Before starting up a cooling-only unit with electric heat in heating mode, perform the following:

- 1. Visually inspect unit for damage or worn components.
- 2. Disconnect power to unit and electric heat and then check the wiring for tight connections and previously overheated wires.
- 3. Apply power to the unit; after the unit is started, check amp draw of fan motors.
- 4. Initiate first and second stage heating demands according to instructions provided with thermostat.
- 5. Check amp draw to all heaters during first and second stage heating.
- 6. Check the heat rise of the unit in full heat.

#### **Heat Pump Heat**

#### Before starting up a heat pump unit in heating mode, perform the following:

- 1. Visually inspect unit for damage or worn components.
- 2. Disconnect power to unit and any electric heat, then check the wiring for tight connections and previously overheated wires.
- 3. Apply power to the unit and any electric heat; after the unit is started, check amp draw of fan motors.
- 4. Initiate first and second stage heating demands according to instructions provided with thermostat.
- 5. Check the heat rise of the unit in full heat.
- 6. Verify performance of first and second stage heat independently.
  - a. Auxiliary and alternate heat control options are dependent on unit type. See unit manual for details.
- 7. Check refrigerant pressures during all stages of heating.
